## Proposition 22

If four straight-lines are proportional then similar, and similarly described, rectilinear figures (drawn) on them will also be proportional. And if similar, and similarly described, rectilinear figures (drawn) on them are proportional then the straight-lines themselves will also be proportional.

Let  $AB$ ,  $CD$ ,  $EF$ , and  $GH$  be four proportional straight-lines, (such that) as  $AB$  (is) to  $CD$ , so  $EF$  (is) to  $GH$ . And let the similar, and similarly laid out, rectilinear figures  $KAB$  and  $LCD$  have been described on  $AB$  and  $CD$  (respectively), and the similar, and similarly laid out, rectilinear figures  $MEF$  and  $NH$  on  $EF$  and  $GH$  (respectively). I say that as  $KAB$  is to  $LCD$ , so  $MEF$  (is) to  $NH$ .

For let a third (straight-line)  $O$  have been taken (which is) proportional to  $AB$  and  $CD$ , and a third (straight-

line)  $P$  proportional to  $EF$  and  $GH$  [Prop. 6.11]. And since as  $AB$  is to  $CD$ , so  $EF$  (is) to  $GH$ , and as  $CD$  (is) to  $O$ , so  $GH$  (is) to  $P$ , thus, via equality, as  $AB$  is to  $O$ , so  $EF$  (is) to  $P$  [Prop. 5.22]. But, as  $AB$  (is) to  $O$ , so [also]  $KAB$  (is) to  $LCD$ , and as  $EF$  (is) to  $P$ , so  $MF$  (is) to  $NH$  [Prop. 5.19 corr.]. And, thus, as  $KAB$  (is) to  $LCD$ , so  $MF$  (is) to  $NH$ .

And so let  $KAB$  be to  $LCD$ , as  $MF$  (is) to  $NH$ . I say also that as  $AB$  is to  $CD$ , so  $EF$  (is) to  $GH$ . For if as  $AB$  is to  $CD$ , so  $EF$  (is) not to  $GH$ , let  $AB$  be to  $CD$ , as  $EF$  (is) to  $QR$  [Prop. 6.12]. And let the rectilinear figure  $SR$ , similar, and similarly laid down, to either of  $MF$  or  $NH$ , have been described on  $QR$  [Props. 6.18, 6.21].

Therefore, since as  $AB$  is to  $CD$ , so  $EF$  (is) to  $QR$ , and the similar, and similarly laid out, (rectilinear figures)  $KAB$  and  $LCD$  have been described on  $AB$  and  $CD$  (respectively), and the similar, and similarly laid out, (rectilinear figures)  $MF$  and  $SR$  on  $EF$  and  $QR$  (respectively), thus as  $KAB$  is to  $LCD$ , so  $MF$  (is) to  $SR$  (see above). And it was also assumed that as  $KAB$  (is) to  $LCD$ , so  $MF$  (is) to  $NH$ . Thus, also, as  $MF$  (is) to  $SR$ , so  $MF$  (is) to  $NH$  [Prop. 5.11]. Thus,  $MF$  has the same ratio to each of  $NH$  and  $SR$ . Thus,  $NH$  is equal to  $SR$  [Prop. 5.9]. And it is also similar, and similarly laid out, to it. Thus,  $GH$  (is) equal to  $QR$ .<sup>†</sup> And since  $AB$  is to  $CD$ , as  $EF$  (is) to  $QR$ , and  $QR$  (is) equal to  $GH$ , thus as  $AB$  is to  $CD$ , so  $EF$  (is) to  $GH$ .

Thus, if four straight-lines are proportional, then similar, and similarly described, rectilinear figures (drawn) on them will also be proportional. And if similar, and

similarly described, rectilinear figures (drawn) on them are proportional then the straight-lines themselves will also be proportional. (Which is) the very thing it was required to show.
