### Proposition 6

If a rational straight-line is cut in extreme and mean ratio then each of the pieces is that irrational (straight-line) called an apotome.

Let  $AB$  be a rational straight-line cut in extreme and mean ratio at  $C$ , and let  $AC$  be the greater piece. I say that  $AC$  and  $CB$  is each that irrational (straight-line) called an apotome.

For let  $BA$  have been produced, and let  $AD$  be made (equal) to half of  $BA$ . Therefore, since the straight-line  $AB$  has been cut in extreme and mean ratio at  $C$ , and  $AD$ , which is half of  $AB$ , has been added to the greater piece  $AC$ , the (square) on  $CD$  is thus five times the (square) on  $DA$  [Prop. 13.1]. Thus, the (square) on  $CD$  has to the (square) on  $DA$  the ratio which a number (has) to a number. The (square) on  $CD$  (is) thus commensurable with the (square) on  $DA$  [Prop. 10.6]. And the (square) on  $DA$  (is) rational. For  $DA$  [is] rational, being half of  $AB$ , which is rational. Thus, the (square) on  $CD$  (is) also rational [Def. 10.4]. Thus,  $CD$  is also rational. And since the (square) on  $CD$  does not have to the (square) on  $DA$  the ratio which a square number (has) to a square number,  $CD$  (is) thus incommensurable in length with  $DA$  [Prop. 10.9]. Thus,  $CD$  and  $DA$  are rational (straight-lines which are) commensurable in square only. Thus,  $AC$  is an apotome [Prop. 10.73]. Again, since  $AB$  has been cut in extreme and mean

ratio, and  $AC$  is the greater piece, the (rectangle contained) by  $AB$  and  $BC$  is thus equal to the (square) on  $AC$  [Def. 6.3, Prop. 6.17]. Thus, the (square) on the apotome  $AC$ , applied to the rational (straight-line)  $AB$ , makes  $BC$  as width. And the (square) on an apotome, applied to a rational (straight-line), makes a first apotome as width [Prop. 10.97]. Thus,  $CB$  is a first apotome. And  $CA$  was also shown (to be) an apotome.

Thus, if a rational straight-line is cut in extreme and mean ratio then each of the pieces is that irrational (straight-line) called an apotome.
