### Proposition 11

(Ratios which are) the same with the same ratio are also the same with one another.

For let it be that as  $A$  (is) to  $B$ , so  $C$  (is) to  $D$ , and as  $C$  (is) to  $D$ , so  $E$  (is) to  $F$ . I say that as  $A$  is to  $B$ , so  $E$  (is) to  $F$ .

For let the equal multiples  $G$ ,  $H$ ,  $K$  have been taken of  $A$ ,  $C$ ,  $E$  (respectively), and the other random equal multiples  $L$ ,  $M$ ,  $N$  of  $B$ ,  $D$ ,  $F$  (respectively).

And since as  $A$  is to  $B$ , so  $C$  (is) to  $D$ , and the equal multiples  $G$  and  $H$  have been taken of  $A$  and  $C$  (respectively), and the other random equal multiples  $L$  and  $M$  of  $B$  and  $D$  (respectively), thus if  $G$  exceeds  $L$  then  $H$  also exceeds  $M$ , and if ( $G$  is) equal (to  $L$  then  $H$  is also) equal (to  $M$ ), and if ( $G$  is) less (than  $L$  then  $H$  is also) less (than  $M$ ) [Def. 5.5]. Again, since as  $C$  is to  $D$ , so  $E$  (is) to  $F$ , and the equal multiples  $H$  and  $K$  have been taken of  $C$  and  $E$  (respectively), and the other random equal multiples  $M$  and  $N$  of  $D$  and  $F$  (respectively), thus if  $H$  exceeds  $M$  then  $K$  also exceeds  $N$ , and if ( $H$  is) equal (to  $M$  then  $K$  is also) equal (to  $N$ ), and if ( $H$  is) less (than  $M$  then  $K$  is also) less (than  $N$ ) [Def. 5.5]. But (we saw that) if  $H$  was exceeding  $M$  then  $G$  was also exceeding  $L$ , and if ( $H$  was) equal (to  $M$  then  $G$  was also) equal (to  $L$ ), and if ( $H$  was) less (than  $M$  then  $G$  was also) less (than  $L$ ). And, hence, if  $G$  exceeds  $L$

then  $K$  also exceeds  $N$ , and if ( $G$  is) equal (to  $L$  then  $K$  is also) equal (to  $N$ ), and if ( $G$  is) less (than  $L$  then  $K$  is also) less (than  $N$ ). And  $G$  and  $K$  are equal multiples of  $A$  and  $E$  (respectively), and  $L$  and  $N$  other random equal multiples of  $B$  and  $F$  (respectively). Thus, as  $A$  is to  $B$ , so  $E$  (is) to  $F$  [Def. 5.5].

Thus, (ratios which are) the same with the same ratio are also the same with one another. (Which is) the very thing it was required to show.
