## Proposition 13

If any multitude whatsoever of numbers is continuously proportional, (starting) from a unit, and the (number) after the unit is prime, then the greatest (number) will be measured by no [other] (numbers) except (numbers) existing among the proportional numbers.

Let any multitude whatsoever of numbers,  $A$ ,  $B$ ,  $C$ ,  $D$ , be continuously proportional, (starting) from a unit. And let the (number) after the unit,  $A$ , be prime. I say that the greatest of them,  $D$ , will be measured by no other (numbers) except  $A$ ,  $B$ ,  $C$ .

For, if possible, let it be measured by  $E$ , and let  $E$  not be the same as one of  $A$ ,  $B$ ,  $C$ . So it is clear that  $E$  is not prime. For if  $E$  is prime, and measures  $D$ , then it will also measure  $A$ , (despite  $A$ ) being prime (and) not being the same as it [Prop. 9.12]. The very thing is impossible. Thus,  $E$  is not prime. Thus, (it is) composite. And every composite number is measured by some prime number [Prop. 7.31]. Thus,  $E$  is measured by some prime number. So I say that it will be measured by no other prime number than  $A$ . For if  $E$  is measured by another (prime number), and  $E$  measures  $D$ , then this (prime number) will thus also measure  $D$ . Hence, it will also measure  $A$ , (despite  $A$ ) being prime (and) not

being the same as it [Prop. 9.12]. The very thing is impossible. Thus,  $A$  measures  $E$ . And since  $E$  measures  $D$ , let it measure it according to  $F$ . I say that  $F$  is not the same as one of  $A, B, C$ . For if  $F$  is the same as one of  $A, B, C$ , and measures  $D$  according to  $E$ , then one of  $A, B, C$  thus also measures  $D$  according to  $E$ . But one of  $A, B, C$  (only) measures  $D$  according to some (one) of  $A, B, C$  [Prop. 9.11]. And thus  $E$  is the same as one of  $A, B, C$ . The very opposite thing was assumed. Thus,  $F$  is not the same as one of  $A, B, C$ . Similarly, we can show that  $F$  is measured by  $A$ , (by) again showing that  $F$  is not prime. For if ( $F$  is prime), and measures  $D$ , then it will also measure  $A$ , (despite  $A$ ) being prime (and) not being the same as it [Prop. 9.12]. The very thing is impossible. Thus,  $F$  is not prime. Thus, (it is) composite. And every composite number is measured by some prime number [Prop. 7.31]. Thus,  $F$  is measured by some prime number. So I say that it will be measured by no other prime number than  $A$ . For if some other prime (number) measures  $F$ , and  $F$  measures  $D$ , then this (prime number) will thus also measure  $D$ . Hence, it will also measure  $A$ , (despite  $A$ ) being prime (and) not being the same as it [Prop. 9.12]. The very thing is impossible. Thus,  $A$  measures  $F$ . And since  $E$  measures  $D$  according to  $F$ ,  $E$  has thus made  $D$  (by) multiplying  $F$ . But, in fact,  $A$  has also made  $D$  (by) multiplying  $C$  [Prop. 9.11 corr.]. Thus, the (number created) from (multiplying)  $A, C$  is equal to the (number created) from (multiplying)  $E, F$ . Thus, proportionally, as  $A$  is to  $E$ , so  $F$  (is) to  $C$  [Prop. 7.19]. And  $A$  measures  $E$ . Thus,

$F$  also measures  $C$ . Let it measure it according to  $G$ . So, similarly, we can show that  $G$  is not the same as one of  $A$ ,  $B$ , and that it is measured by  $A$ . And since  $F$  measures  $C$  according to  $G$ ,  $F$  has thus made  $C$  (by) multiplying  $G$ . But, in fact,  $A$  has also made  $C$  (by) multiplying  $B$  [Prop. 9.11 corr.]. Thus, the (number created) from (multiplying)  $A$ ,  $B$  is equal to the (number created) from (multiplying)  $F$ ,  $G$ . Thus, proportionally, as  $A$  (is) to  $F$ , so  $G$  (is) to  $B$  [Prop. 7.19]. And  $A$  measures  $F$ . Thus,  $G$  also measures  $B$ . Let it measure it according to  $H$ . So, similarly, we can show that  $H$  is not the same as  $A$ . And since  $G$  measures  $B$  according to  $H$ ,  $G$  has thus made  $B$  (by) multiplying  $H$ . But, in fact,  $A$  has also made  $B$  (by) multiplying itself [Prop. 9.8]. Thus, the (number created) from (multiplying)  $H$ ,  $G$  is equal to the square on  $A$ . Thus, as  $H$  is to  $A$ , (so)  $A$  (is) to  $G$  [Prop. 7.19]. And  $A$  measures  $G$ . Thus,  $H$  also measures  $A$ , (despite  $A$ ) being prime (and) not being the same as it. The very thing (is) absurd. Thus, the greatest (number)  $D$  cannot be measured by another (number) except (one of)  $A$ ,  $B$ ,  $C$ . (Which is) the very thing it was required to show.
