

Supplement to *Fractal Matings*

Here we include the pictures of the polynomials which combine with the rabbit to produce the rational maps shown in the article. As a reminder, here are the Julia sets of the rational maps.

The corresponding polynomial Julia sets are given below. Notice that the first polynomial on the second row is the rabbit itself!

As a challenge, can you see these Julia sets in the original pictures? Remember you have to “turn them inside out”, like we did with the basilica in the article.
