

Instructions for making a pseudosphere from cones (based on an idea by Daniel Walsh)

- (1) Make 20 copies of this template.
- (2) Cut out one circle and cut it open along the dashed line, cut out one circle minus slice 1, one circle minus slice 1+2, one circle minus slice 1+2+3, etc.
- (3) From the resulting wedges form cones. To get nice round cones make the lowest numbered slice on every wedge into an overlap.
- (4) Stack the cones in order starting with the widest based one at the bottom.
